Multi-Channel RF and MW Signal Generators

300 kHz to 6, 12, 20, 33 and 40 GHz

**Document size:**

1 (one) title page  
15 (Fünfzehn) content pages

## DEFINITIONS

- The specifications in the following pages describe the warranted performance of the instrument for  $23 \pm 5^\circ\text{C}$  after a 30-minute warm-up period

**Typical:** Expected mean values, not warranted performance

**Min and max:** Parameter range that is guaranteed by product design, and/or production tested. Warranted performance specifications include guard-bands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions.

## INTRODUCTION

- **A compact, 300 kHz to 6, 12, 20, 33, or 40 GHz ultra-low phase noise, 25  $\mu\text{s}$  phase coherent switching, multi-channel signal generator**

The APMSXXG is a phase-coherent, multiple-channel, high output power, ultra-fast switching and low phase noise signal generator with a frequency range from 300 kHz to 6, 12, 20, 33 or 40 GHz. It is ideally suited for a wide range of applications, where good signal quality, accurate and wide output power ranges, and very stable phase coherence among all channels are required. Excellent phase noise is combined with good spurious, harmonic rejection and optionally leading-edge switching speed of 25  $\mu\text{s}$ .

A high-stability OCXO reference provides excellent frequency accuracy and stability. The generator accepts a wide range of external references including the commonly used 10 and 100 MHz for higher phase synchronization, and a flexible reference choice in the range of 1-250 MHz for those applications with customer- or system-specific reference frequencies. Moreover, the APMSXXG features a pair of ANAPICO-specific high-frequency SYSREF ports (one input and one output) that enables excellent phase synchronization among the outputs from multiple APMSXXG modules.

The APMSXXG comes in a standard 19 inch 1U (up to 4 channels) rack-mountable module form and offers various control interfaces like USB, LAN or GPIB. Each interface allows easy and fast communication using SCPI 1999 command set. Remote control of the instrument can be quickly attained from any host system. A customer-supplied application programming interface (API) or programming examples for Matlab, Labview, C++ and other commercially available tools make the control implementation very straightforward.

# PERFORMANCE CURVES

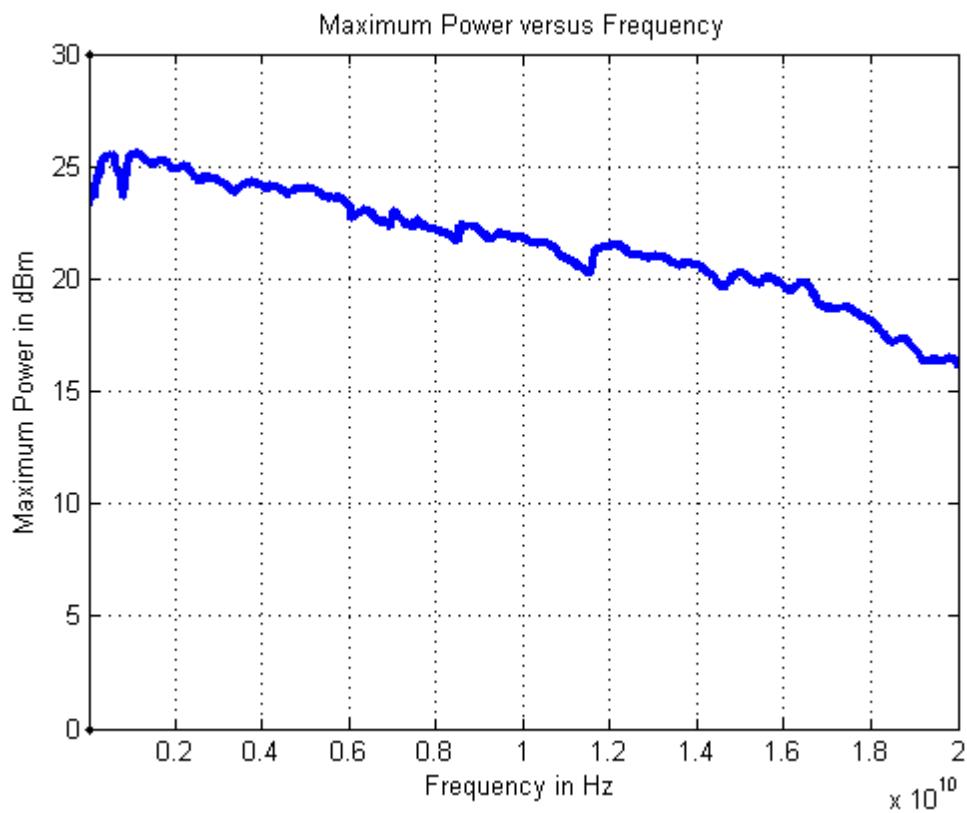

## • Phase Noise with option ULN

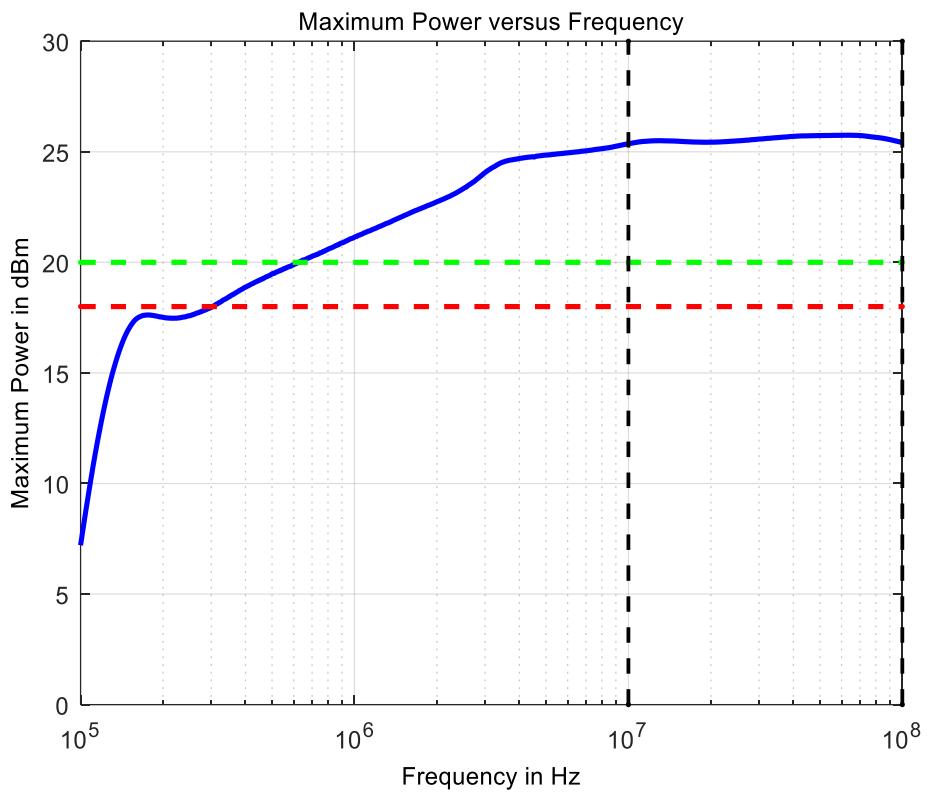

## • Maximum Output Power APMS20G

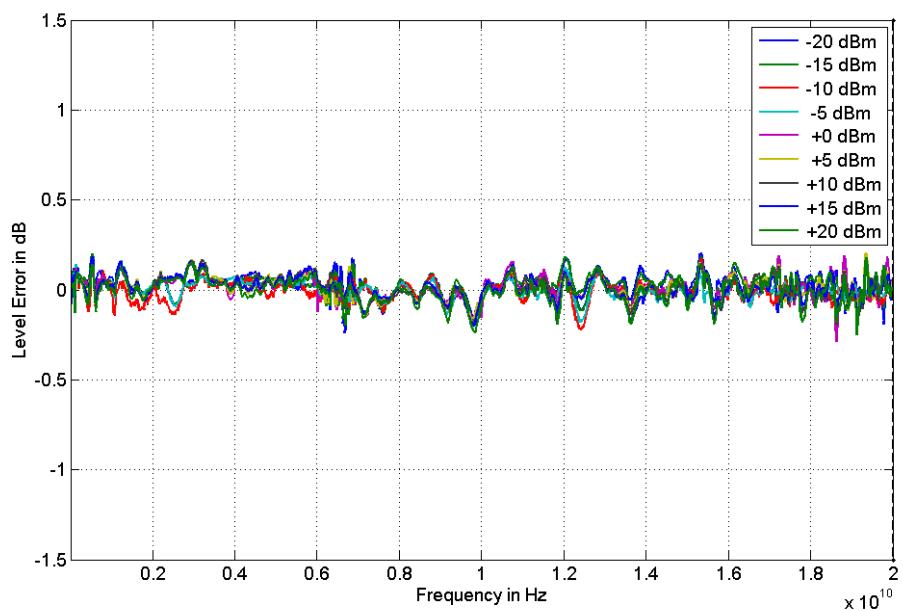

## • Maximum Output Power APMS20G (with option PE4)

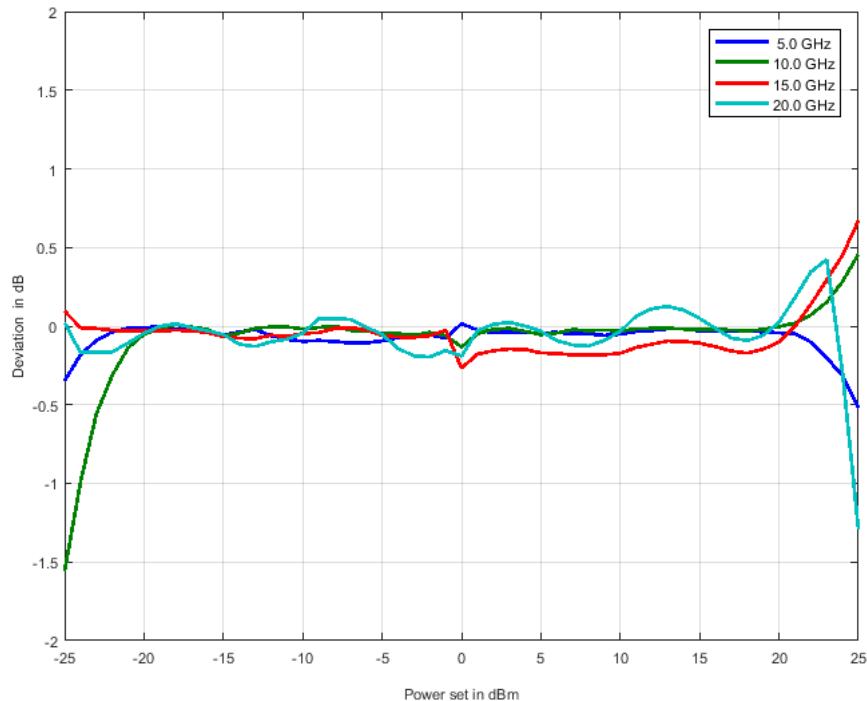

## • Low frequency response (100 kHz to 100 MHz)

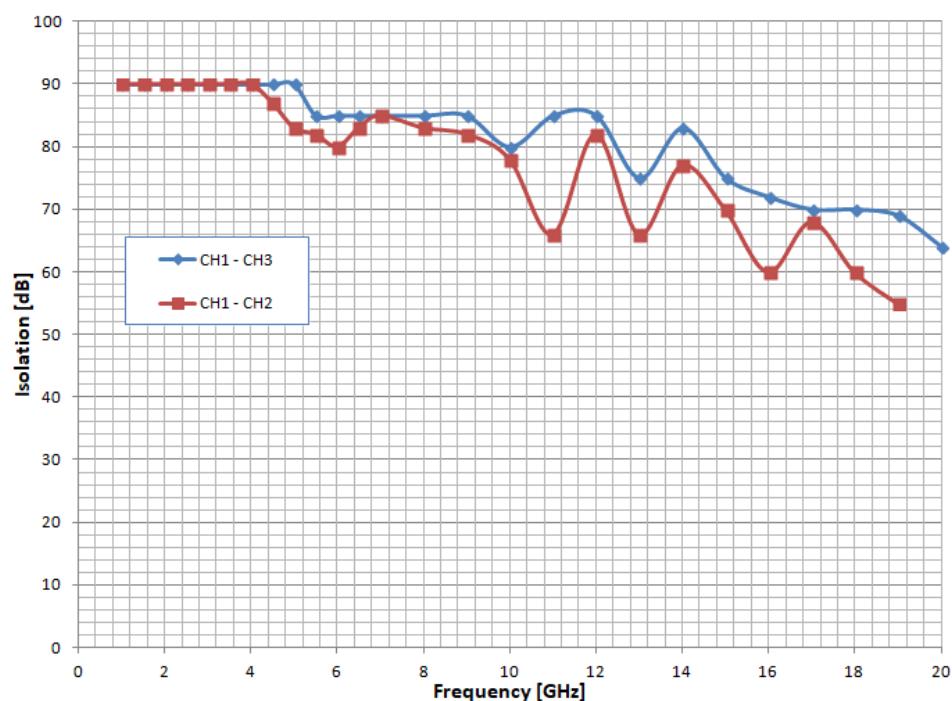

## • Level error (300 kHz to 20 GHz, APMS20G)

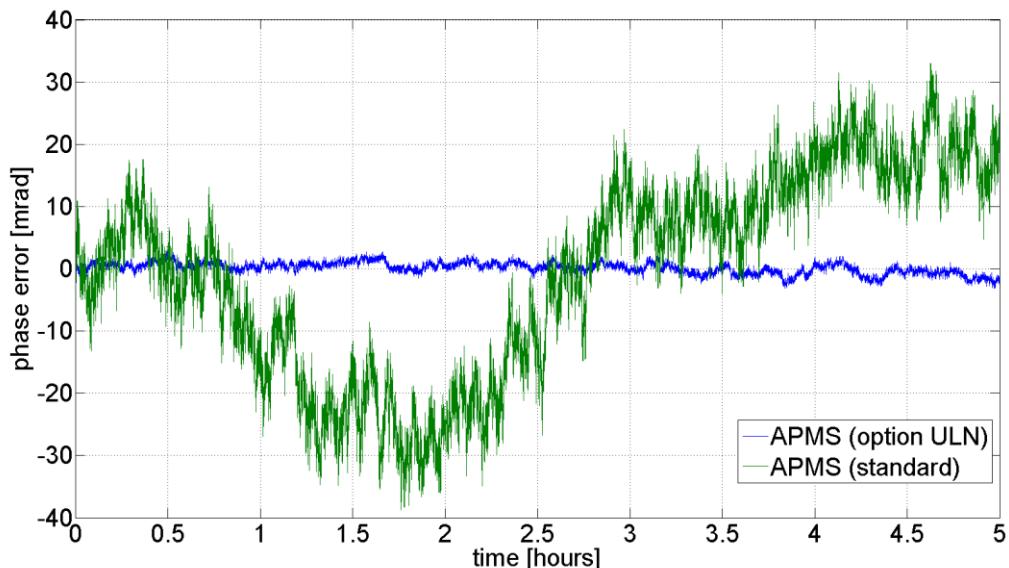

## • Level linearity

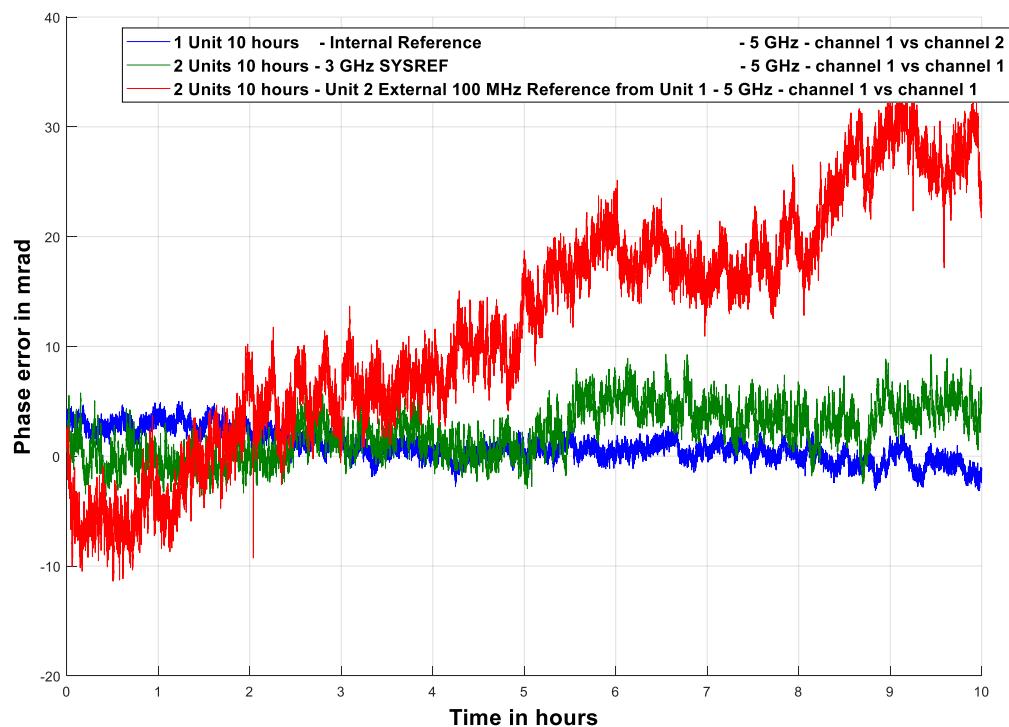

## • Channel to Channel Isolation (P=10 dBm, 10 MHz spacing)

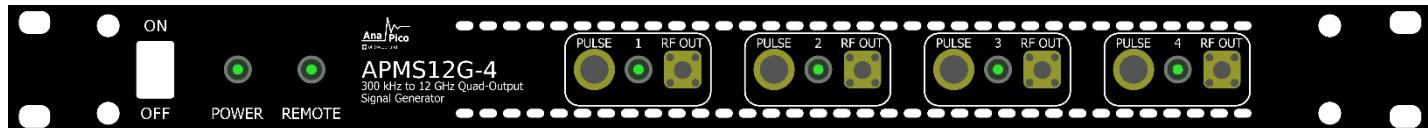

## Phase Stability at 5GHz: APMS Standard (green) vs APMS ULN (blue)

## Channel-to-Channel Phase Stability under Different Test Conditions

## Connectors (Front)

1. RF outputs:  
APMS33G, 40G: K (2.92 mm) female  
APMS06G, 12G, 20G: SMA female
2. External pulse modulation inputs: BNC female
3. DC power switch

## Connectors (Rear)

1. Internal reference output (SYSREF OUT): BNC female
2. External reference input (SYSREF IN): BNC female
3. Trigger output: BNC female
4. Trigger input: BNC female
5. Internal reference output (REF OUT): BNC female
6. External reference input (REF IN): BNC female
7. GPIB: IEEE-488.2, 1987 with listen and talk (optional)
8. USB 2.0 host and device
9. LAN connection: RJ-45
10. FUSE (3.15 A)
11. DC Power plug (24V, 6A)

APMSXXG-ULN	APMS33G-2-ULN	2-channel 300 kHz to 33 GHz low phase noise, fast switching signal generator, 19" 1HU rack-mount module
APMSXXG-ULN	APMS33G-4-ULN	4-channel 300 kHz to 33 GHz low phase noise, fast switching signal generator, 19" 1HU rack-mount module
APMSXXG-ULN	APMS40G-2-ULN	2-channel 300 kHz to 40 GHz low phase noise, fast switching signal generator, 19" 1HU rack-mount module
APMSXXG-ULN	APMS40G-4-ULN	4-channel 300 kHz to 40 GHz low phase noise, fast switching signal generator, 19" 1HU rack-mount module
APMSXXG	option LN	Enhanced close in phase noise and frequency stability
APMSXXG	option ULN	Ultra-low phase noise, incl. the function of option LN, SYSREF supported
APMSXXG	option IPM	Intra-pulse modulation capability (cannot be combined with ULN)
APMSXXG	option PHS	Phase coherent switching (only with option ULN)
APMSXXG	Option FS	Ultra-fast switching speed
APMSXXG	option VREF	Flexible external reference frequency support in range 1 to 250 MHz
APMSXXG	option MOD	Amplitude, Frequency, Phase modulations added.
APMS06/12G	option PE4-12	Electrical step attenuator (6 & 12 GHz version)
APMS20G	option PE4-20	Electrical step attenuator (20 GHz version)
APMS33/40G	Option PE4-40	Electrical step attenuator (33 & 40 GHz version)
APMSXXG	Option GPIB	GPIB interface
APMSXXG	Option WE	One year warranty extension (standard: 2 years)
APMSXXG	Option ReCal	Recalibration with test data (recommended: 2 years interval)
